Exciting climbs and fun on the sliding poles

Billie is one of our four two-tower play systems which is filled with play activities that keep the children active and really challenge their gross motor skills. This model has a floor height of 140 cm and 190 cm, respectively, as well as a climbing wall, a climbing net and sliding poles that are all suited perfectly for older children. Do you want a model with play zones that also includes the younger children? Then have a look at our **LB260 Benja** play system.

The Billie play system has two towers that are connected by a climbing net. The connection is made even more fun and challenging, as the offset placement of the net results in the children having to go through the green frames in the net in order to go from one tower to the other. At the same time, the children can climb to the floors of the towers via a rope ladder and two levels or they can use the climbing wall, which also leads to the sliding poles, where they can take a well-deserved slide down to the ground.

When children exercise their motor skills and balance by sliding and climbing on a play system like Billie, it also helps them strengthen their mental development in relation to courage and self-confidence. The better they are doing physically, the more they dare to try new things and the more they are able to enter new games and relationships, which has a positive effect on their social skills. Therefore the children's games and activities on the playground are not just healthy for the body, they are also helpful for the mind.

A well-known favourite with a new element

The climbing nets in our Basic series now have an extra element in the form of two large green frames in the net. These frames give the
