Two-tower play system tests gross motor skills

Kepal is one of the **Explore** universe's two-tower play systems. The system includes the specially developed rope tunnel, which children can negotiate from both the inside and the outside. To get to the second tower, it is necessary to climb over the net bridge, and you need to hold tight, as the bridge is a true test of balance and coordination.

Diamond panel and cave panel

The diamond panel and cave panel are placed at ground level, so there are activities for the youngest. The diamond panel conceals hidden treasure – where are the two diamonds? The panel encourages look-and-find play, while strengthening children's fine motor skills and creative and cognitive abilities. At the cave panel, children can crawl through the rubber slats, which will develop their sense of space.

LEDON Explore is your guarantee of a high-quality playgrounds

- Designed in cooperation with children to ensure the highest possible play value.
- Developed using materials that require low maintenance and with natural colours.
- 100% Danish-produced
